SEATRACE AI — OFFICIAL MARITIME INCIDENT DOSSIER

CONFIDENTIAL INVESTIGATION DOSSIER • INCIDENT IN-2026-61C2 • GENERATED AT 2026-10-23 13:55:40 UTC

1. Incident Summary & Geographic Coordinates

Incident ID	IN-2026-61C2	**Classification**	HIGH
Title	Kandla Deepwater Fairway Hydrocarbon Anomaly	**Status**	VESSEL_ANALYSIS
Maritime Region	Gulf of Kutch	**Coordinates**	22.8500°N, 70.0500°E
Detection Time	2026-10-23T12:00:00Z	**Estimated Volume**	75.0 m³
Sensor / Mission	Sentinel-1B C-SAR	**Spill Type**	Crude Oil

2. Satellite Detection & Look-Alike Validation

No satellite detection record linked.

Validation Decision: **SUPPORTED** by reviewer Senior Inspector (Coast Guard Environmental Command). Surface wind speed: 8.5 kts. Biogenic surfactant risk: LOW. Proximity to charted natural seep: 110.0 km. Notes: *Confirmed crude oil slick damping pattern.*

3. Environmental Origin Reconstruction

Lagrangian backward trajectory simulation executed using **500 particles** over a **18-hour window** with windage leeway 3.0%. Estimated release origin centroid is located at **23.1188°N, 69.8908°E** (spatial uncertainty ±2.0 km). Forcing models: INCOIS Regional Hydrodynamic Model (1/12°) + NOAA GFS 10m Wind.

4. AIS Vessel Trajectory Correlation & Attribution

No candidate vessels correlated for this time window.

5. Cryptographic Evidence Chain of Custody

LEGAL NOTICE: This investigative dossier contains probabilistic modeling, satellite remote sensing interpretations, and AIS track correlation. Vessel rankings constitute candidate investigative leads for competent maritime enforcement authorities and do not constitute self-executing legal guilt without field corroboration.
